

# LIPOSUCTION

**EXPERIENCE & AESTHETICS** As with all cosmetic surgery, it is essential that you choose a surgeon who has both exceptional technical expertise and a finely developed aesthetic sense. I have been helping patients attain newfound confidence in their bodies since 1995. My focus on physical proportion and the three-dimensional profile enables me to create the most elegant, balanced and natural-looking results for each individual.

**DR. DAVID ZLOTY** *Dedicated to improving and expanding current cosmetic surgical techniques, Dr. David Zloty is Clinical Assistant Professor and Director of Surgical Education in the Division of Dermatology at UBC and the Medical Director of the Dermatologic Surgery Centre, one of BC's premier sites for cosmetic surgery.*

## ENHANCE YOUR PHYSIQUE

Liposuction can dramatically reveal your underlying beauty, shaping and defining your body and giving you a renewed sense of poise and confidence. I encourage you to speak openly about the results you hope to obtain and to ask any questions you may have about the procedure. Together, we can decide on the best course of action to help you achieve the look you want.

Interested in attaining a dramatic and flattering silhouette? Please contact me for more information about transforming your look through tumescent liposuction.

*The possibilities are limitless.*

**BRING NEW DEFINITION TO SPECIFIC AREAS OF YOUR BODY—REFINING & ENHANCING YOUR LOOK.**

**TAKE YOUR BODY TO THE NEXT LEVEL**

We all have things we'd like to change about our silhouette. Yet even with exercise and dieting, some localized areas of body fat—often inherited or age-related—are almost impossible to eliminate.

With liposuction and the right cosmetic surgeon, however, the possibilities are limitless. Liposuction gives you the opportunity to sculpt and refine your body – bringing new definition to specific areas and helping you attain the shape you want.

Undesired fat can now be safely removed from almost any body area, including the neck, arms, male and female breasts, abdomen, back, waist and love handles, buttocks, inner and outer thighs, knees, calves and ankles.

**AN EASILY TOLERATED & PRECISE**

**PROCEDURE** First developed in the 1980s, tumescent liposuction combines an extremely good safety profile with great precision in fat removal. It is also easily tolerated, has a fast post-operative recovery time and produces optimal results. Most importantly, it is an option for healthy women and men of all ages.

Only local anesthetic, combined with a light sedative, is used during the treatment, so you are drowsy but remain awake and relaxed. Compared with other body sculpting procedures, tumescent liposuction involves virtually no blood loss and minimal risk of infection, as the local anesthetic used may inhibit the growth of bacteria. Most patients return to work three to five days after the treatment and resume an active lifestyle shortly thereafter.

**YOUR SAFETY IS PARAMOUNT**

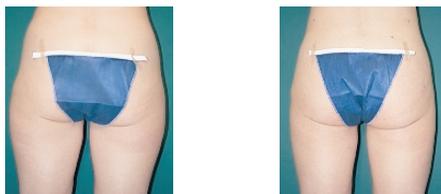

*True* tumescent liposuction is extremely safe, with no known deaths or serious complications ever reported from its use in North America. The Dermatologic Surgery Centre is a fully accredited out-patient facility that meets all safety standards of a hospital.

**RESULTS THAT LAST** You will notice a difference about a week after the procedure, with the full results becoming apparent in three to six months' time. If your weight remains stable, results will be permanent. Tiny scars associated with the surgery will, in almost all cases, virtually disappear. And because the procedure maintains the fibrous connections between the skin and its underlying tissue, there is no need to worry about excessive skin folds. With healing, these fibrous bands contract and pull the skin into its new shapely contour. However, while liposuction can improve cellulite, it will not eliminate it entirely.

**WHAT IS THE TUMESCENT LIPOSUCTION TECHNIQUE?**

*Tumescent liposuction represents the very best in safety and excellence. No general anesthetic or intravenous sedation is used. First, a dilute anesthetic solution is injected almost painlessly into the fatty tissue, causing the area to become tumescent (firm and swollen). Tiny straw-like instruments called microcannulas are then inserted into fat compartments under the skin—enabling the surgeon to gently loosen and remove the unwanted fat deposits. This method ensures the safe and effective removal of large amounts of fat uniformly, with few skin irregularities, minimal bleeding and bruising, and little post-operative discomfort.*
